Alternate Terminology Servers

Enabling Alternate Terminology Servers in the CDS Authoring Tool

- **Discussed in previous meetings**
  - **Need**:
    - Some CDS authors use or maintain value sets outside of Value Set Authority Center (VSAC)
    - Some value sets exist only in FHIR Implementation Guides (no terminology server)
  - **Approach**:
    - Support search and selection using additional FHIR-based terminology servers
    - Consider support for search and selection using non-FHIR-based terminology servers
    - Consider support for direct entry of value set URIs
- **Questions:**
  - Are there specific FHIR terminology servers we should support?
  - Are there specific non-FHIR terminology servers we should support?
  - Is direct entry of value set URIs useful? Even if there are limitations?

FHIR = Fast Healthcare Interoperability Resources
URI = Uniform Resource Locator

Artifact Comments: Commenter-specific Information

MITRE

Artifact Consumer Comments: Commenter-specific Information

- **Previously discussed allowing comments from consumers of artifacts**
  - Anonymous comments would not be allowed, in order to convey trust in the feedback/comment
  - Requires a new type of account holder, for a user only consuming CDS from the Repository
- **If there is still agreement on the above, what information should display with the comment:**
  - First and last name
  - First name and last name initial
  - First initial and last name
  - OR: one of the above *plus* an email address?
    - An email address, alone, is not sufficient
